IDEX Corporation

Security Assessment

March 2026

SOURCE INVENTORIES

Prepared by: John Shelest | Palo Alto Networks Solutions Consultant
Environment: Panorama PAN-OS 11.1.10-h1 • 80+ Managed Device Groups

1. EXECUTIVE SUMMARY

Analysis of IDEX Corp's network security posture based on techsupport files and 65,534 threat log rows (March 9, 2026). Internal zone filter applied: Source Zone ≠ 'untrust' and ≠ 'guest'.

739 APPLICATIONS	**58** HIGH RISK	**411** SAAS APPS
104,259 EXPLOITS	**104,358** THREATS	**20** MALWARE

Key Findings

- **739 total applications observed** (171% above Manufacturing peer group baseline).
- **Active C2 beaconing confirmed** from 18+ internal IPs to 24+ malicious domains.

- **CRITICAL: Log4j RCE exploit confirmed** for user idexna\bidservices.
- **174-day content gap** discovered in Panorama signature updates.

CRITICAL FINDINGS & RISK IMPACT

1

ACTIVE BREACH

A named employee account (idexna\bidservices) connected to an attacker server via Log4j. Forensic investigation required.

2

TARGETED INFRASTRUCTURE

Attacker registered idexdmz.com specifically to impersonate your brand and capture internal data.

3

IDENTITY PHISHING

1,163 machines resolved okta-ema.com, a fake login page designed to steal SSO credentials.

• SO WHAT — WHY THIS MATTERS

» 739 apps means your attack surface is 3x larger than peers. Every unmanaged app is an entry point.
» The 174-day content gap is the single most dangerous item; you are blind to 6 months of intelligence.
» 44% SaaS bandwidth with zero DLP oversight represents critical data exposure risk.
